## Superior to Currently Available Calcium & Vit D3 Combinations

(Which help only in increasing calcium absorption but "NO" proper utilization of calcium)

- ▣ Works at cellular level, carboxylates Osteocalcin
- ▣ Ensures proper mineralization
- ▣ Improves bone mineral density
- ▣ Reduces risk of fractures

**With Vitamin K2-7 Control & Safety**

Vitamin K2-7 (The safer part of vitamin K) ensures productions of bone & matrix amino acid  $\gamma$ -carboxy-glutamic acid proteins regulating bone & vascular calcification. Low vit K concentrations results in increased risk of fractures & vascular calcification & frequent complication in hemodialysis patients.
